Designation : Assistant Professor

Dept : Computer Science &
Engineering

Date of Submission: 25.05.2026

1. Project Title:

AI-Integrated Habit Tracker

2. Introduction:

The AI-Integrated Habit Tracker is a smart application designed to help users develop good habits and improve daily productivity. The system uses Artificial Intelligence (AI) to analyze user activities, provide personalized suggestions, send smart reminders, and track habit progress automatically.

3. Problem Statement:

- Many people fail to maintain good habits regularly.
- Users forget daily tasks and goals.
- Traditional habit trackers cannot provide smart recommendations.
- Lack of motivation and consistency reduces productivity.

Traditional habit tracker apps only store data but do not provide intelligent guidance or personalized support

4. Objectives:

- Track daily habits and routines
- Use AI to analyze user behavior
- Give smart habit suggestions
- Send reminders and motivational notifications
- Generate progress reports and analytics
- Improve productivity and time management

5. Proposed Solution:

This system will allow users to create habits, set goals, and monitor daily activities. AI algorithms will analyze habit completion patterns and suggest improvements, reminders, and personalized routines based on user behavior.

6. AI Integration:

This is the most important section.

- AI-based recommendation system
- Smart reminder prediction

- User behavior analysis
- Productivity score generation
- Personalized motivational suggestions
- Future habit prediction

Example:

AI will analyze user activity data and recommend the best time for completing habits. The system can predict whether a user may miss a habit and send motivational alerts automatically.

7. Features of the System

01.User Features

- User Registration & Login
- Add/Edit/Delete Habits
- Daily Habit Tracking
- Progress Dashboard
- Reminder Notification
- Habit Categories
- Streak Counter
- AI Suggestions
- Dark/Light Mode
- Weekly/Monthly Reports

02.Admin Features

- Manage Users
- View Reports
- Manage Notifications
- System Analytics

8. Technology Stack:

Part	Technology
Frontend	React.js
Backend	Node.js + Express.js
Database	PostgreSQL
AI/ML	OpenAI API / Gemini API
Deployment	Vercel / Render

9. System Architecture:

- Backend
- Frontend
- Database
- AI Module

10. Database Design:

The possible tables are,

- users
- habits
- habit_logs
- reminders
- ai_recommendations
- progress_reports

11. Expected Outcomes:

- Better habit consistency
- Improved productivity
- Personalized user experience
- Smart daily planning

12. Future Scope:

- Mobile app integration
- Voice assistant support
- Wearable device connection
- Advanced AI prediction
- Social/community features

13. Conclusion:

The AI-Integrated Habit Tracker is a modern productivity solution that combines habit management with AI technology to help users achieve personal goals effectively and consistently.
